

FUTURE OF PRODUCTION

Which Countries are Leading the Way?

Technologies such as the Internet of Things, artificial intelligence, and additive manufacturing, which now makes objects ranging from medical implants to aircraft wings, are spurring the development of new production techniques - but which countries are leading the way?

Using data from the World Economic Forum's 'Readiness for the Future of Production' report, we've taken a look at the top 10 countries that are leading the way when it comes to driving production forward.

View the map below to find out.

Production Score

Which country will be next to drive the future of production forward?
