

RENEWABLE BOOM

A New Emphasis on Renewables in a World of Cheap Oil and Gas

PLUNGING PRICES

Oil and gas prices have fallen, but so have the costs of wind and solar. Large-scale solar power has plummeted 60% and wind is down 40% since 2008.

MORE POWER

Solar and wind are expected to account for **70%** of new power capacity in the U.S. in 2016.

POLICY POWER

Congress renewed solar and wind tax credits in December of 2015 for another **FIVE** years. Experts think that will encourage the country to add another 20 gigawatts of solar power to our power grid.

MONEY MATTERS

A recent study by Goldman Sachs shows that the market for low-carbon technologies such as wind, solar, LEDs and hybrid or electric vehicles now exceeds **\$600 BILLION**.

AMBIT'S COMMITMENT

Ambit Energy is committed to providing our Customers with competitive pricing and great service as well as the most reliable and most environmentally friendly sources of energy. We're proud to be Green-e certified and to offer Green-e energy plans as well as solar energy through Sunrun. Count on Ambit to continue to invest in a stronger, cleaner energy future.
